# PROGRAM

# ***Razionale***

Modern cardiology had an intensive growth in last years both in the therapeutic and the interventional methodology

Until last October 2010, two different and successful cardiac meetings were hold in Turin for the University and the Hospital Departments.

In order to achieve a more effective and a wider diffusion of this two important events, we decided to joint the efforts into one single congress, dealing specifically with both arrhythmology and haemodynamics.

Furthermore, starting from the concept that the patient is unique but can be affected by different pathologies, the ambitious aim that we want to reach is to put together themes regarding several different but correlated foci: from the clinics, the diagnostics, interventional and the surgery.

We are proud to say that as in the past, Mayo Clinic and the most expert Cardiologists and Arrhythmologists from all over the world will give their important contribution to this meeting about the state of art of Cardiology.

Welcome to the 2011 Turin Joint meeting of Arrhythmology and Haemodynamics.
