Thursday 13th March 2014

Hilton Birmingham Metropole Hotel

We are pleased to announce the date of our 4th annual meeting which addresses specifically the percutaneous treatment of bifurcation disease.

This conference is aimed at PCI operators who are interested in enhancing their expertise in treating this complex lesion subset and exploring the value of purpose designed devices.

As before, this one day meeting will combine key talks by international experts in the field, angio-based panel discussions and pre-recorded "live" procedures ("Real-to-Reel") which demonstrate current techniques in bifurcation stenting as well as the use of newer devices produced specifically to address this type of disease.

We look forward to seeing you at BLT 2014.

Planning Team:

Dr Mike Norell, Heart and Lung Centre Wolverhampton

Dr Farzin Fath-Ordoubadi, Manchester Royal Infirmary

Dr David Hildick-Smith, Royal Sussex County Hospital

This Meeting is fully funded by contributions from:
