

November 28-29

# 2014

This course has 34 participants working on 17 surgical tables supervised by more than 14 European experts in this field, i.e. 1 expert per table. The table will be fully equipped with a camera of 2.4 mm attached to a video system and the instrumentation required. The advanced course is intended for all those who have experience in wrist arthroscopy as well as for those who have already attended the basic course. It enables the participant to carry out more sophisticated techniques with the help of international experts. Teaching is both theoretical and practical and there is a high expert to participant ratio.
