Dear colleagues,

IQUAM (the International Committee for Quality Assurance and Medical Technologies and Devices in Plastic Surgery), is a vivid and active Society within the structure of IPRAS (the International Confederation for Plastic Reconstructive & Aesthetic Surgery), with a unique task to provide guidance and opinions on the role and safety of materials and techniques employed in this specialty. The most important product of the biennially organized world conference with delegates from all Societies of IPRAS (over 100), is the "Position Statement" which is a public statement circulated among all interested parties e.g. Scientific Societies, Industry, Government officials, Individual Plastic Surgeons, Researchers and others.

In recent years plastic surgery has undergone great changes in technologies, devices and procedures. New methods have been evolving with a galloping pace, new materials and technologies appear in front of us every day. It is imperative that the medical and other relevant scientists express their opinions, which is freely available to all concerned including the industry scientific staff and advisors. This opinion is updated regularly and it is in this context that this World Conference is organized biennially.

This Congress, is the 11th of its kind, taking place in Budapest, **April 10th-13th 2014**, with the participation of World authorities in Plastic Surgery and research from all over the world – all of them opinion leaders.

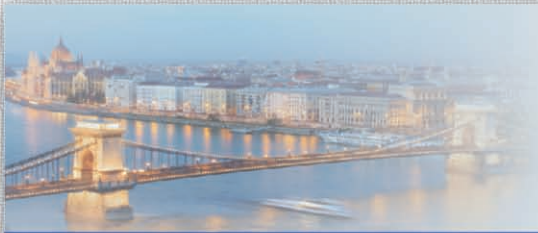

Along with the Delegates from the National Societies we will discuss **hot topics and cutting edge unpublished scientific results and will formulate the next updated "Position Statement"** which will be released and distributed to all interested parties. We know that each specialist can enrich plastic surgery with his own experience and new knowledge, and every meeting is an occasion to exchange views and experiences. As the international delegates of IQUAM are monitoring all scientific developments in the field most of the presentations will be upon invitation. This meeting cannot be easily substituted by scientific journals. Published papers are presentations without an immediate possibility to express one's attitude and to exchange opinions between the author and the recipients. In addition, **the IQUAM Consensus Conference features new knowledge that is not yet generally consented.**

We welcome you in Budapest!!!

As a qualified Plastic Surgeon, you can provide today the benefits of the next generation of breast implants. **Q Inside Safety Technology** was originally approved by the FDA in 2004 and is now the brain of all Motiva Ergonomix® implants:

- ❶ Used as an electronic serial number to safely identify implantable medical devices such as breast implants from outside the body to help ensure patient safety.
- ❷ Electronically conveys a unique numeric sequence that can never be lost or misplaced and can be accessed in a physician's office with a proprietary handheld reader.
- ❸ Access to secure, non-invasive verification of implant-specific data, such as serial number, manufacturer name, and lot number, without having to remove the implant.
- ❹ Information retrieved from Q Inside Safety Technology is particularly important in the unlikely event of a safety issue or product recall.
- ❺ Provides clinical and healthcare benefits via customizable software and data analytics.
- ❻ All information is kept private and confidential.

To learn more about the benefits offered by Q Inside Safety Technology visit www.VeriteQcorp.com or www.motivaimplants.com.
