

PERIOPERATIVE MONITORING
Mougins, France - May 26-29, 2013

The aim of the meeting is to review the various aspects of perioperative monitoring, with the goal of better defining the role of the various available monitoring systems in preventing postoperative complications.

Ample time will be reserved for discussion and debate.

The results of the discussions will be synthesized in a summary paper after the conference.

Cardiovascular monitoring

Defining fluid requirements in the perioperative period: Just enough, not too much

Cardiac output monitoring: How and what for?

Inotropic support: Just enough, not too much

Respiratory monitoring

How to prevent pulmonary complications

Difficult weaning

Monitoring sedation and analgesia

The best sedative regimen: Just enough, not too much

How to control pain: Just enough, not too much

Metabolic monitoring

How important is glucose control?

When to start feeding after major surgery?

How to define caloric needs
