

VALVE SUMMIT

28TH-30THAPRIL 2014

Valve Summit 2014 will be held for the third edition in Acireale, Sicily, from 28th to 30th April 2014, in cooperation with San Raffaele Hospital (Milan), Evanston Hospital (Evanston, Illinois) and Prince Sultan Cardiac Center (Buraidah, Saudi Arabia).

The Valve Summit is already recognized as one of the main interventional meetings in Italy, whose program is planned to provide the best available clinically relevant information on current and future directions in valve heart disease. It is also one of the few European events with such a specific focus and a strictly educational format, with a limited number of 200 max attendees.

Valve Summit 2014 features the participation of about 50 international renowned faculty members from USA, Germany, France and other countries.

Didactic taped cases demonstrations as well as lectures covering all the major topics will be on stage during the 2-day Course with expert discussion and audience interaction.

Particular emphasis will be given to new frontiers of innovations in the techniques of transcatheter aortic valve intervention and mitral valve repair.

This will make the meeting a unique international opportunity to convey the latest scientific updates to people who are upfront in translating new knowledge into clinical application.
