Home to Trauma & Orthopaedics

### Value statement

AOTrauma is committed to improve patient care outcomes through the highest quality education. We strive to combine the right knowledge and surgical skills that empower the orthopaedic and trauma surgeons to put theory into practice and to improve fracture management for the benefit of the patient.

# The AO Principles of fracture management

Fracture reduction and fixation to restore anatomical relationships.

Fracture fixation providing absolute or relative stability, as required by the "personality" of the fracture, the patient and the injury.

Early and safe mobilization and rehabilitation of the injured part and the patient as a whole. Preservation of the blood supply to soft tissues and bone by gentle reduction techniques and careful handling.

The first AO Course was held in Davos in 1960 — these early courses pioneered psychomotor techniques by teaching practical skills of AO Techniques.

Since those early days over 250.000 surgeons and 135.000 ORP staff from over 110 countries have attended AO Courses — we now launch AOTrauma to move our education to the next level.

### **Foreword**

Since 1960 Prof. Thiel has developed his own method of embalming cadavers in Graz. The aim was to facilitate both students and doctors of medicine to find conditions on cadavers comparable to living persons. Thus an optimal possibility was created: Surgeons of different special fields are now enabled to train surgery on cadavers as an exercise before acting on patients. In addition new instruments and new methods of surgical approaches have been and can be developed.

Thiel's method of embalming was published in 1992 and 2002 in "Annals of Anatomy". Doctors and anatomists from all over the world have come to Graz in the meantime to learn his method in order to use it in their homelands for students education and in postgraduate courses for doctors.

Based on this embalming Prof. Thiel published also an atlas named "Photographic Atlas of Practical Anatomy". The first edition – translated into many languages – is out of print, the second edition has been on sale since December 2002.

The main advantage of the new embalming is that the cadavers colour, consistency and movability are preserved to a very great extent. In Addition the storable stock solution and the working solutions are bactericidal, fungicidal and virucidal.

The institute of anatomy in Graz houses approximately one thousand doctors every year, who visit the institute to attend our workshops and postgraduate courses on embalmed cadavers as a result of the special facilities given.

Friedrich Anderhuber, O.Univ.-Prof. Dr.

The course is dealing with surgical approaches, anatomy and techniques of osteosynthesis.

The main interest is extended pracital exercises and handson-work on cadavers at the Institute of Anatomy by only two participants for each working station.

Beside the scientific program Graz – chosen 2003 as Europe's Culture Capital UNESCO world Heritage Site – has a lot of attractions and sightseeing.

Wolfgang Grechenig, Ao. Univ.-Prof. Dr.

# Course description

The topics will be taught in lectures.

The lectures are followed by practical exercises on human specimens of the Anatomical Institute.

During these dissections key steps are projected on the screens.

Each working place is limited to 2 participants.

Faculty members are there to help you.

Each participant has one side of a complete head and neck site to dissect and one side to assist.

Instruments, gloves and gowns are supplied.
